

## One ALM platform. Infinite flexibility.

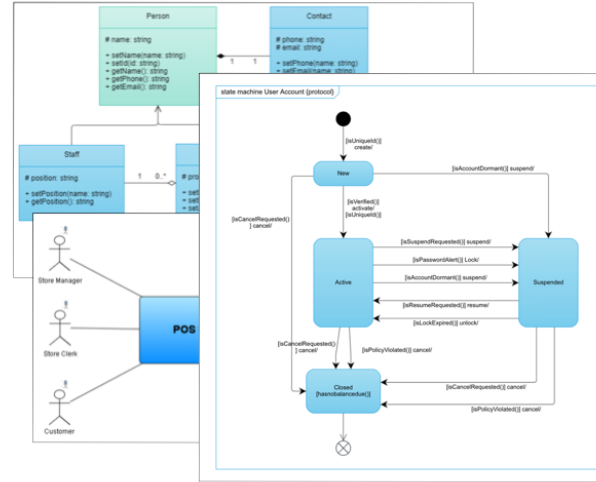

- Top-tier features at a fraction of the price
- End-to-end traceability across the lifecycle
- Integrated SysML and UML editor for modelling system behaviour and architecture
- Choose the AI you trust – from Azure OpenAI to on-prem DeepSeek, the choice is yours
- Derive and create test cases, specifications or other artefacts automatically
- From good to great – refine your requirements and test cases by the quality advisor
- Built-in change management & impact analysis
- Create variants, compare changes, and move updates with ease
- On-Premise or SaaS / WebUI / Small footprint Easy Windows Installation / HQ Support

## Application Lifecycle Management since 2010

TopTeam Requirements combines enterprise-grade functionality with excellent value for money - making it the smart choice for modern Application Lifecycle Management.

## UML and SysML Editor

TopTeam unites requirements, systems, and software engineering in one tool – with integrated UML and SysML editors and end-to-end traceability across all artifacts.

## Traceability Features

Create a coverage matrix to ensure all requirements are met and specs are tested.

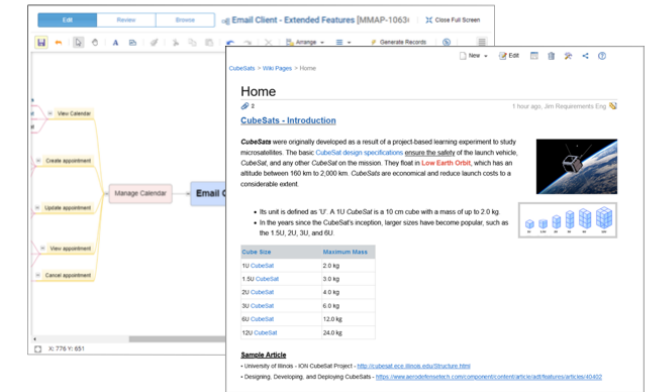

Visualize traceability across your project in multiple views. Get a clear overview and take a bird's-eye look at your entire V-Model – or zoom in on individual artifacts and follow their links instantly.

## Use it your way

TopTeam is your Swiss Army knife – flexible, powerful, and ready to adapt. Whether you're following a complex V-Model, managing modular components, or simply working from a single requirements sheet – you have the freedom to define exactly the artifact types your process demands. Define custom link types, set your own rules, and create optional relationships as needed. Add custom attributes, data types, and workflows tailored to your process – and you're ready to go.

## MindMaps and Wikis

Use TopTeam's built-in MindMap editor to capture goals, ideas, requirements, and actions visually. Instantly generate artifacts from your MindMap and trace their connections with full visibility. Turn team expertise into shared knowledge – with easily accessible project wikis.

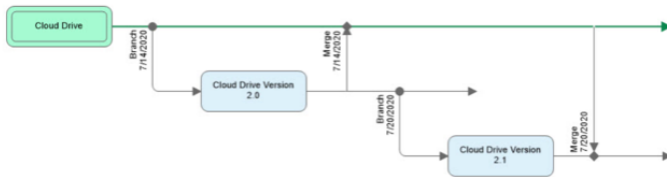

## Usability

TopTeam includes many additional smart helpers that make daily work easier – like the built-in LaTeX formula editor, which lets you quickly integrate complex formulas with ease.

$$x = \frac{-b \pm \sqrt{b^2 - 6ac}}{2a}$$

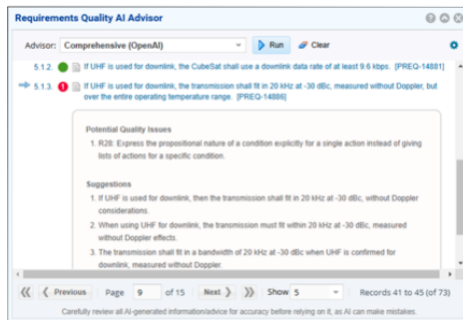

## Variant and Version Management

Need to work on multiple versions in parallel (e.g. A-samples, B-samples, ...) or different product variants for specific customers? With TopTeam's powerful branching feature, you can easily branch your projects, work in parallel, compare differences, deliver selected changes, or merge everything back together.

## Artificial Intelligence Integration

AI is becoming a powerful ally – helping development teams save time and focus on what really matters. Create new artifacts or derive additional ones from existing items – such as generating test cases from requirements. Use the built-in Quality Advisor to check whether your specifications meet industry standards like the INCOSE guidelines. Once you've used these tools, you won't want to work without them again.

Choose the AI provider you trust – like OpenAI on Microsoft Azure – and benefit from enterprise-grade security and full data privacy compliance. TopTeam also supports integration with fully self-hosted AI solutions, like DeepSeeL, giving you full control over your AI environment.

## Who is TechnoSolutions and what is TopTeam Requirements?

Founded in 1995 and headquartered in the USA, TechnoSolutions launched TopTeam Requirements in 2010 – a powerful solution still relatively unknown outside the USA. TechnoSolutions is a pure development-driven company that focuses on engineering excellence rather than costly marketing or corporate overhead. That's why TechnoSolutions, with its agile and focused team, is able to deliver this ALM solution at an unbeatable price.

TopTeam is a complete ALM solution, such as PTC Codebeamer, Siemens Polarion or IBM ELM. The range of functions is close to an IBM ELM solution. But while IBM ELM shines with enterprise-scale capabilities, TopTeam stands out for its simplicity and ease of use.

## Development that Listens

TopTeam is developed and maintained by a lean, agile team committed to rapid innovation and customer responsiveness. New features are delivered in short, regular cycles, and bug fixes are implemented quickly when needed. Unlike with large competitors, you won't be routed through layers of generic support – instead, you'll speak directly with experienced developers who understand your use case and can offer real solutions. Feature requests that benefit the broader user base are often implemented swiftly, bringing real value to all customers.

## Quick Setup – Smooth Rollout

TopTeam runs on standard Windows systems and requires only moderate resources, making rollout easy for any IT department.

## License Model

TopTeam offers a simple and flexible licensing model – choose between named user licenses or a shared concurrent pool. Both options are available for **purchase** or **subscription**.

	Author	Collaborator	Viewer *
Named	✓	✓	✓
Concurrent	✓	✓	✓

- **Author** – full access to all TopTeam features. Each Author license includes **three free Viewer licenses** to provide read-only access for additional users.
- **Collaborator** – a cost-effective option designed for **reviews, audits, and full read access**.
